RE: Site Inspection, Hansen Stone Quarries, Wesco Project, S/013/001, Duchesne County, Utah

Date of Inspection: July 27, 1994
Time of Inspection: 1201 - 1211
Conditions: partly cloudy, warm
Participants: Tony Gallegos, Lynnn Kunzler, DOGM

Purpose of Inspection: To examine the current status of the operation.

This inspection consisted of briefly driving past the western end of the project disturbance and walking at the eastern end of the project. The operator was not at the site during this inspection; however, Mr. Dan Powell was informed of our planned inspection of this site. (Mr. Powell has assisted Mr. Hansen with Division permitting requirements).

Some dozer tracks present in the western end of the project area, indicate some recent activity in that area. The western end does not seem to have increased in disturbed area since my last inspection. The quarry in the eastern end does not seem to have increased in disturbed area either. There was some new disturbance between the two "end" disturbances. The new disturbance consists of a small excavation into the outcrop and some dozer trails running cross country from the access road to the eastern end. The new disturbance does not significantly increase the total disturbed area for the project. Photos were taken of the site to document the current status. This project includes state lands (School Institutional Trust Lands).
